IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant: MICHAEL BOOTHBY

Title: LOW PROFILE COMBINATION SCRUBBING

AND SQUEEGEE DEVICE

Serial No: 10/032,800

Filing Date: December 26, 2001

Attorney Docket No: BOOM 101

Date: March 13, 2002

Box: Patent Applications

COMMISSIONER OF PATENTS AND TRADEMARKS

12 Washington, DC 20231

INFORMATION DISCLOSURE STATEMENT UNDER 37 CFR 1.97

In compliance with Applicant's and his attorney's duty of disclosure under 37 CFR 1.56, the Applicant does hereby submit the following Information Disclosure Statement, Form PTO - 1449, and copies of the references listed thereon.

A patent search was manually conducted for the invention described in the abovereferenced patent application. In the course of the search, no patents were found for an
apparatus that has the same structural features or that operates in the same manner such as the
invention listed above. The following five (5) patents, however, were noted as being of
interest and are hereby brought to the Examiner's attention as references AA - AE. The
significance of each listed reference is as follows:

AA. U.S. Patent No. 5,908,255 (Branch) discloses a surface cleaning device

(425) 637-3035

RECEIVED
TO 1700

including an elongated, rigid handle attached to a body with opposite extending squeegee and brush. A handle is threadingly engaged at one end to the body and a pump spray device is engaged with the other end of the handle and extending into a hollow chamber within the handle for spraying fluid.

U.S. Patent No. 5,519,911 (<u>Callander</u>) discloses a headlight cleaner for a vehicle including a brush head, a brush handle having a tip end coupled to the brush head, a base end, and a joint there between to thereby define a straight short segment and a straight long segment. The opposite end of the handle includes an elongated squeegee. The joint may be adjusted to allow the brush or squeegee to be positioned at different angles.

U.S. Patent No. 5,123,137 (McCauley) discloses a low profile, dual cleaning squeegee device for cleaning opposite surfaces, such as a truck rear cab window and opposite cab front window. The device includes an adjustable cleaning head with two pivoting cleaning members. A handle-like assembly connected to a rod controls movement of the cleaning member.

U.S. Patent No. 5,101,530 (<u>Hansen et al.</u>) discloses a lightweight squeegee suitable for use in and around the home for cleaning and drying shower and tub enclosures, windows, spa decks, autos and boat decks. A cylindrical handle holds dual S-shaped blades which extend along the handle and beyond one end of the handle to facilitate cleaning in tight spaces.

U.S. Patent No. 4,776,716 (<u>Huang</u>) discloses a foldable, multipurpose cleaning device comprised of a fluid receiving receptacle member detachably connected to a cleaning head assembly. The receptacle member includes a plunger and dispensing means for the fluid. The cleaning head assembly includes an elongated scraper or squeegee and an elongated

brush or sponge.

The Applicant and his attorney submit that the above-cited references taken alone or in combination neither anticipate nor render obvious the present invention. None of the references disclose or claim a combination brush and squeegee device comprising a low-profile body with a cleaning surface, such as a sponge or cleaning pad, attached along the top surface, and a rubber blade, attached along the front surface, connected to an articulated pole using three joints that allow the user to easily adjust the position of the pole on the body so that the device may be used on windows located in spaces with narrow clearances. A rotating joint disposed between the pole and the body allows the user to rotate the body 180° around the central axis of the pole. First and second pivoting joints, disposed between the body and the pole, allow the user to selectively adjust the angular position of the pole and body. The listed references relate only to the general field of the disclosure and do not constitute an admission that the references are relevant or material to the claims; they are cited only as constituting the closest art of which the Applicant and his attorney are aware.

Respectfully submitted,

DEAN A. CRAINE
